A REVOLUTION IN AIR JET BATHS

BainUltra®, the pioneer and inventor of the air jet bath, presents its most recent technological innovation: Geysair™, revolutionizing hydro-thermo massage®!

The perfect balance of water, air, and warmth

Geysair™ is a new hot air jet system that surrounds the bather in a cocoon of warmth. Like the hot steam that geysers shoot into the air, the air flow produced using Geysair technology remains warm until it comes into contact with the skin.

The sensation of coolness as dry air bubbles meet skin dissipates, and the water temperature remains constant so the bather experiences a blissfully relaxing experience.

Technology, pure and simple

The operating principle behind Geysair is simple: it heats and humidifies the jets of air so they retain their warmth. Baths equipped with Geysair technology offer all the technical and therapeutic advantages that BainUltra® is known for. And the Geysair system always remains impeccably hygienic.

On a more practical side, Geysair uses 20 amps of electricity. Geysair use generates an electricity cost as low as 1.7¢ for a 20-minute session.
